Gale Artemis: the world’s largest scholarly research collection in the humanities

Gale Artemis is a groundbreaking research experience that unites Gale’s globally acclaimed digitised primary source and reference collections to enable innovative research. By building a seamless research environment for Gale’s multiple collections, Gale is creating the largest digital humanities collection in the world.

This new research experience is named after the Greek goddess, Artemis, who symbolises new ideas, power and “the hunt”. Above all, Gale Artemis promotes discovery.

- Students will now have the tools to guide their research
- Researchers will have the ability to challenge assumptions and create new theories
- Both will make research connections that, until now, have not been possible

Gale Artemis will release in a series of phases and will expand over the next few years. Gale will start by integrating its Literature Resources from Gale and Literature Criticism Online into a single research environment. Separately but simultaneously Gale will migrate Eighteenth Century Collections Online and Nineteenth Century Collections Online onto one platform. Over the coming years this environment will expand to include the majority of Gale’s Digital Collections and Gale Literature Collections, uniting these two into one comprehensive research experience.
**Gale Artemis: Literary Sources** enables users to cross-search a wealth of primary sources, critical articles, literary and cultural analysis and biographies. Starting with Literature Resources from Gale — Literature Resource Center, LitFinder, MLA International Bibliography and eBooks from Gale Virtual Reference Library — and Literature Criticism Online, users can engage with literature content in ways that were never previously possible through a range of cutting-edge interactive tools, enriched metadata and detailed subject indexing:

**Subject indexing:**
Subject indexing aids content discovery across collections, drawing connections that simple search and retrieve cannot achieve. No other digital archives publisher is subject indexing their primary source content in this way — but we at Gale believe it’s worth the investment and expense.

**Graphing Tool:**
This allows users to see the frequency of their search term(s) in the content over time, which can suggest the importance of particular concepts during given periods. It allows users to ask new questions of data. For example, does the frequency of the word ‘Empire’ coincide with the rise of the terms ‘tragedy’ and ‘comedy’ in popular discourse?

**Term Clusters:**
Users can see topics that commonly occur in relation to their search term which helps uncover hidden connections, or be a helpful starting point in the early stages of research.

Contact **emea.galereply@cengage.com** to request a trial today to cross-search all the literature resources currently available on **Gale Artemis: Literary Sources**

If your library currently subscribes to two or more literature products, you automatically have access to **Gale Artemis** at no extra cost to the library.
